Core Lab Interaction

Homework 1

Your assignment is to HANDWRITE one small HTML document

1. The HTML document is to contain an unordered list of your classes this term inside of the <BODY>, and contain a <TITLE> inside of the <HEAD> as well
2. Wrap a hyperlink around your class names, the hyperlinks point to a location (a physical location, so a building, street, classroom, whatever you like)
3. Use at least 2 colors (whatever colors you like) and do your own manual syntax highlighting and think about the following:
   - What feels good?
   - At a quick glance, does the information you wish to know pop out / is clearly visible?

some helpful thoughts:

- You can use the document we coded together in class as a reference, the HTML will be very similar
- make sure it contains <html>, <head>, <title>, <body>, <ul>, and a few <li> and <a href=
- The names of your classes can be short and informal if you want
- You can review how Sublime Text handles syntax highlighting as a guide. Notice that symbols (< > =) are all one color, element names (li ul body html) are another, things in quotes are another color. You have the freedom to make up your own system, but just have a reason for doing what you do.
- I wrote everything out in pencil, then went back over it in pen, then erased the pencil. That worked well for me.

finally, we breezed passed hyperlinks in class so if you are unsure about hyperlinks, each <li> row will look something like:

```
<li><a href="_____">_____</a></li>
```

with the first _____ is your hyperlink location, and the second _____ is your class name
